CREATE A MODEL TREE WITH SEA FOAM

The trunk is made from twisted wire. Start with many gathered lengths and work up the tree, creating branches by gathering sections of the trunk wire.

You can always add extra wire to create more branches.

Once you are happy with the shape of the tree, coat the trunk and branches with hot glue.

You can then top the glue with filler and scratch in trunk detail once it has dried.

After painting the tree, pieces of Seafoam trees can be attached using superglue.

The sea foam creates very the smaller branches of the tree.

You can then apply the foliage using texture applied using a PVA glue.

Here we have used a mid green colour.

This tree can be viewed in the 'Non Specific Species section' of our online Bespoke Tree gallery.

Tree name/species:

Twisted Wire & Sea Foam Tree

Height:

230mm

Trunk colour specification:

Brown/Speckled

Foliage specification:

None and mid green

THE PRODUCTS USED

LT61000	Seafoam trees	FP20015	Primer Hycote 150ml Grey
LG30069	Texture fine mid green 100cc	FF00002	Humbrol model filler
AH10004	Glue gun Bostik Handy	SW20000	1mm soft aluminium wire
AH20004	Glue gun sticks	SW20009	2mm soft aluminium wire
AP00036	PVA glue 170ml (ArtStat)	SW40035	Mild steel wire
AS00009	Zap foam safe kicker spray	TK30066	Cutter, side cutting mini
AS00016	Slo-zap 28.3ml	TT00002	Tweezer, precision
FB10019	Dope brush small		
FB10004	Fine hair 1 paint brush
