- **Scenic snow kit** LX60045
- **Snow (powder)** LX60032
- **White flock** LG20021
- **Frost and snow effect spray** LX60046

SCENIC SNOW KIT

The Scenic Snow Kit (LX60045) from Deluxe contains all you need for dramatic winter snow effects.

The kit contains:

- Icy Sparkles 25g
- Snowflakes 125g shaker pack
- Scenic Bond adhesive 100ml

It will cover up to 0.5m² depending on the depth of coverage.

If you need more coverage, a 500ml pot of Snowflakes (LX60035) is available separately, which will give up to 1.5m².

For Urban Scenes, apply a thin coat of Scenic Bond especially to areas where snow normally collects like roofs and window ledges. Then sprinkle the Scenic Snowflakes from side to side.

You can create 'slipped' snow by dabbing Scenic Bond on top & re-applying Scenic Snowflakes.

For Rural Scenes, apply Scenic Bond to branches of the trees using a brush and sprinkle Scenic Snowflakes from a height 300mm to give the snow a natural look. Repeat this step to give the desired effect.

For Grass areas use the same technique dropping the snow from 300mm and repeat the process to build areas of 'heavy' and 'light' snow.

This technique also works well on walls.

For Frozen Snow Effects sprinkle Icy Sparkles on top of the Scenic Snowflakes.

SNOW (POWDER)

From the NOCH winter range contains Snow Powder (LX60032) comes in a 250g box

This unique glittering white powder is great for creating non permanent winter scenes.

Just sprinkle onto your scenery with a sieve.

WHITE FLOCK

Flock fibres can be used as an effective snow effect.

The fibres are approximately 1mm in length and are best spread using a sieve from a height.

The best adhesive for creating snow effects is an oil-based, matt white paint.

PVA adhesive can be used but, since this 'skins' very quickly, it can be applied to only a very small area at a time.

We created this simple snowy scene for Shrunken Magazine using just a few of our products.

The base was painted with flock adhesive, then, while wet, sprinkled with mid green flock through a sieve. Once dry, we knocked off the excess flock and drilled holes for the conifer trees.

Using PVA glue to secure, we planted a 60mm, a 85mm & a 100mm conifer tree and left them to dry.

Next, we masked off the base and sprayed the whole model liberally with Photo Mount and sprinkled with white flock and left it a while to settle. The excess texture was knocked off, then the trees were given another coat of spray glue & more texture was applied.

The scene was left to dry for an hour or so then the excess texture was knocked off.

The Land Rover and 25mm conifer on the car roof were then glued on using PVA glue to complete the scene.

FROST AND SNOW EFFECT SPRAY

Create realistic wintery effects from a spray can. It can be used on almost any surface including glass, wood and metal, especially useful for use on costumes and props.

It's fast drying, sticks upon contact but can be removed from smooth surfaces such as glass (rough surfaces is more difficult to remove). To make snow permanent, apply fixative/varnish spray between coats.
