

WHITE STYROFOAM

RF31001 - 08

- Brilliant white
- Lightweight and easy to handle
- Consistent texture with no gaps and holes
- Density: 30kg m³

OVERVIEW

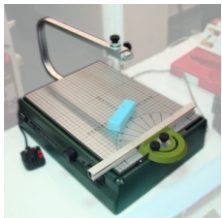

White styrofoam is a finely textured surface provides a smoother finish for model making projects, whether painted or covered. Great for precise model building.

It is easier to cut, shape, glue, paint and cover than any expanded polystyrene.

The best tool type to use to cut this material is a hot wire cutter (draw/push slowly so as not to damage the heated wire).

We also stock grey and blue styrofoam.

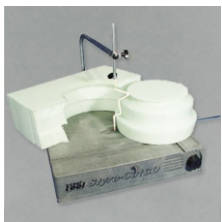

TOOLS AND ACCESSORIES

TK30032
Proxon hot wire cutter.
This is our best selling hot wire cutter.
390 x 280mm working surface
Mains operated.

AP00022
